

Problem Solving with GeoGebra

Construction Problems for GCSE Mathematics

1.

Given a square with variable side construct a rectangle with the same area whose sides are in the ratio 2:1.

Can you extend this to $n:1$?

2.

Construct the largest circle (in-circle) in a 3-4-5 triangle?
What is the radius of this circle?
What about other triangles based on Pythagorean triples?

3.

Given two points A and B construct points C and D so that ABCD is a rectangle with both sides independently variable.

Construct a rectangle with twice the area whose sides are in the same ratio.

4.

Construct 3 circles on the vertices of a triangle such that the circles always just touch.
