QUESTION PAPER

Candidates answer on the Printed Answer Book.

OCR supplied materials:

- Printed Answer Book 4766/01
- MEI Examination Formulae and Tables (MF2)

Other materials required:

- Scientific or graphical calculator

Duration: 1 hour 30 minutes

INSTRUCTIONS TO CANDIDATES

These instructions are the same on the Printed Answer Book and the Question Paper.

- The Question Paper will be found inside the Printed Answer Book.
- Write your name, centre number and candidate number in the spaces provided on the Printed Answer Book. Please write clearly and in capital letters.
- **Write your answer to each question in the space provided in the Printed Answer Book.** Additional paper may be used if necessary but you must clearly show your candidate number, centre number and question number(s).
- Use black ink. HB pencil may be used for graphs and diagrams only.
- Read each question carefully. Make sure you know what you have to do before starting your answer.
- Answer **all** the questions.
- Do **not** write in the bar codes.
- You are permitted to use a scientific or graphical calculator in this paper.
- Final answers should be given to a degree of accuracy appropriate to the context.

INFORMATION FOR CANDIDATES

This information is the same on the Printed Answer Book and the Question Paper.

- The number of marks is given in brackets [] at the end of each question or part question on the Question Paper.
- You are advised that an answer may receive **no marks** unless you show sufficient detail of the working to indicate that a correct method is being used.
- The total number of marks for this paper is **72**.
- The Printed Answer Book consists of **12** pages. The Question Paper consists of **4** pages. Any blank pages are indicated.

INSTRUCTION TO EXAMS OFFICER/INVIGILATOR

- Do not send this Question Paper for marking; it should be retained in the centre or recycled. Please contact OCR Copyright should you wish to re-use this document.

This paper has been pre modified for carrier language

Section A (36 marks)

- 1 The amounts of electricity, x kWh (kilowatt hours), used by 40 households in a three-month period are summarised as follows.

$$n = 40 \qquad \Sigma x = 59\,972 \qquad \Sigma x^2 = 96\,767\,028$$

- (i) Calculate the mean and standard deviation of x . [3]
- (ii) The formula $y = 0.163x + 14.5$ gives the cost in pounds of the electricity used by each household. Use your answers to part (i) to deduce the mean and standard deviation of the costs of the electricity used by these 40 households. [3]
- 2 A survey is being carried out into the sports viewing habits of people in a particular area. As part of the survey, 250 people are asked which of the following sports they have watched on television in the past month.
- Football
 - Cycling
 - Rugby

The numbers of people who have watched these sports are shown in the Venn diagram.

One of the people is selected at random.

- (i) Find the probability that this person has in the past month
- (A) watched cycling but not football, [1]
- (B) watched either one or two of the three sports. [2]
- (ii) Given that this person has watched cycling, find the probability that this person has not watched football. [2]
- 3 A normal pack of 52 playing cards contains 4 aces. A card is drawn at random from the pack. It is then replaced and the pack is shuffled, after which another card is drawn at random.
- (i) Find the probability that neither card is an ace. [2]
- (ii) This process is repeated 10 times. Find the expected number of times for which neither card is an ace. [1]

- 4 A rugby team of 15 people is to be selected from a squad of 25 players.
- (i) How many different teams are possible? [2]
- (ii) In fact the team has to consist of 8 forwards and 7 backs. If 13 of the squad are forwards and the other 12 are backs, how many different teams are now possible? [2]
- (iii) Find the probability that, if the team is selected at random from the squad of 25 players, it contains the correct numbers of forwards and backs. [2]
- 5 At a tourist information office the numbers of people seeking information each hour over the course of a 12-hour day are shown below.
- 6 25 38 39 31 18 35 31 33 15 21 28
- (i) Construct a sorted stem and leaf diagram to represent these data. [3]
- (ii) State the type of skewness suggested by your stem and leaf diagram. [1]
- (iii) For these data find the median, the mean and the mode. Comment on the usefulness of the mode in this case. [4]
- 6 Three fair six-sided dice are thrown. The random variable X represents the highest of the three scores on the dice.
- (i) Show that $P(X = 6) = \frac{91}{216}$. [3]

The table shows the probability distribution of X .

r	1	2	3	4	5	6
$P(X = r)$	$\frac{1}{216}$	$\frac{7}{216}$	$\frac{19}{216}$	$\frac{37}{216}$	$\frac{61}{216}$	$\frac{91}{216}$

- (ii) Find $E(X)$ and $\text{Var}(X)$. [5]

Section B (36 marks)

- 7 A drug for treating a particular minor illness cures, on average, 78% of patients. Twenty people with this minor illness are selected at random and treated with the drug.
- (i) (A) Find the probability that exactly 19 patients are cured. [3]
- (B) Find the probability that at most 18 patients are cured. [3]
- (C) Find the expected number of patients who are cured. [1]
- (ii) A pharmaceutical company is trialling a new drug to treat this illness. Researchers at the company hope that a higher percentage of patients will be cured when given this new drug. Twenty patients are selected at random, and given the new drug. Of these, 19 are cured. Carry out a hypothesis test at the 1% significance level to investigate whether there is any evidence to suggest that the new drug is more effective than the old one. [8]
- (iii) If the researchers had chosen to carry out the hypothesis test at the 5% significance level, what would the result have been? Justify your answer. [2]

- 8 The box and whisker plot below summarises the weights in grams of the 20 chocolates in a box.

- (i) Find the interquartile range of the data and hence determine whether there are any outliers at either end of the distribution. [5]

Ben buys a box of these chocolates each weekend. The chocolates all look the same on the outside, but 7 of them have orange centres, 6 have cherry centres, 4 have coffee centres and 3 have lemon centres.

One weekend, each of Ben's 3 children eats one of the chocolates, chosen at random.

- (ii) Calculate the probabilities of the following events.

A: all 3 chocolates have orange centres

B: all 3 chocolates have the same centres [6]

- (iii) Find $P(A|B)$ and $P(B|A)$. [3]

The following weekend, Ben buys an identical box of chocolates and again each of his 3 children eats one of the chocolates, chosen at random.

- (iv) Find the probability that, on both weekends, the 3 chocolates that they eat all have orange centres. [2]
- (v) Ben likes all of the chocolates except those with cherry centres. On another weekend he is the first of his family to eat some of the chocolates. Find the probability that he has to select more than 2 chocolates before he finds one that he likes. [3]

Annotations and abbreviations

Annotation in scoris	Meaning
✓ and ✕	
BOD	Benefit of doubt
FT	Follow through
ISW	Ignore subsequent working
M0, M1	Method mark awarded 0, 1
A0, A1	Accuracy mark awarded 0, 1
B0, B1	Independent mark awarded 0, 1
SC	Special case
^	Omission sign
MR	Misread
Highlighting	
Other abbreviations in mark scheme	Meaning
E1	Mark for explaining
U1	Mark for correct units
G1	Mark for a correct feature on a graph
M1 dep*	Method mark dependent on a previous mark, indicated by *
cao	Correct answer only
oe	Or equivalent
rot	Rounded or truncated
soi	Seen or implied
www	Without wrong working

Subject-specific Marking Instructions for GCE Mathematics (MEI) Statistics strand

- a Annotations should be used whenever appropriate during your marking.

The A, M and B annotations must be used on your standardisation scripts for responses that are not awarded either 0 or full marks. It is vital that you annotate standardisation scripts fully to show how the marks have been awarded.

For subsequent marking you must make it clear how you have arrived at the mark you have awarded.

- b An element of professional judgement is required in the marking of any written paper. Remember that the mark scheme is designed to assist in marking incorrect solutions. Correct *solutions* leading to correct answers are awarded full marks but work must not be judged on the answer alone, and answers that are given in the question, especially, must be validly obtained; key steps in the working must always be looked at and anything unfamiliar must be investigated thoroughly.

Correct but unfamiliar or unexpected methods are often signalled by a correct result following an *apparently* incorrect method. Such work must be carefully assessed. When a candidate adopts a method which does not correspond to the mark scheme, award marks according to the spirit of the basic scheme; if you are in any doubt whatsoever (especially if several marks or candidates are involved) you should contact your Team Leader.

- c The following types of marks are available.

M

A suitable method has been selected and *applied* in a manner which shows that the method is essentially understood. Method marks are not usually lost for numerical errors, algebraic slips or errors in units. However, it is not usually sufficient for a candidate just to indicate an intention of using some method or just to quote a formula; the formula or idea must be applied to the specific problem in hand, eg by substituting the relevant quantities into the formula. In some cases the nature of the errors allowed for the award of an M mark may be specified.

A

Accuracy mark, awarded for a correct answer or intermediate step correctly obtained. Accuracy marks cannot be given unless the associated Method mark is earned (or implied). Therefore M0 A1 cannot ever be awarded.

B

Mark for a correct result or statement independent of Method marks.

E

A given result is to be established or a result has to be explained. This usually requires more working or explanation than the

establishment of an unknown result.

Unless otherwise indicated, marks once gained cannot subsequently be lost, eg wrong working following a correct form of answer is ignored. Sometimes this is reinforced in the mark scheme by the abbreviation isw. However, this would not apply to a case where a candidate passes through the correct answer as part of a wrong argument.

- d When a part of a question has two or more 'method' steps, the M marks are in principle independent unless the scheme specifically says otherwise; and similarly where there are several B marks allocated. (The notation 'dep *' is used to indicate that a particular mark is dependent on an earlier, asterisked, mark in the scheme.) Of course, in practice it may happen that when a candidate has once gone wrong in a part of a question, the work from there on is worthless so that no more marks can sensibly be given. On the other hand, when two or more steps are successfully run together by the candidate, the earlier marks are implied and full credit must be given.
- e The abbreviation ft implies that the A or B mark indicated is allowed for work correctly following on from previously incorrect results. Otherwise, A and B marks are given for correct work only — differences in notation are of course permitted. A (accuracy) marks are not given for answers obtained from incorrect working. When A or B marks are awarded for work at an intermediate stage of a solution, there may be various alternatives that are equally acceptable. In such cases, exactly what is acceptable will be detailed in the mark scheme rationale. If this is not the case please consult your Team Leader.

Sometimes the answer to one part of a question is used in a later part of the same question. In this case, A marks will often be 'follow through'. In such cases you must ensure that you refer back to the answer of the previous part question even if this is not shown within the image zone. You may find it easier to mark follow through questions candidate-by-candidate rather than question-by-question.

- f Wrong or missing units in an answer should not lead to the loss of a mark unless the scheme specifically indicates otherwise.

Candidates are expected to give numerical answers to an appropriate degree of accuracy. 3 significant figures may often be the norm for this, but this always needs to be considered in the context of the problem in hand. For example, in quoting probabilities from Normal tables, we generally expect *some* evidence of interpolation and so quotation to 4 decimal places will often be appropriate. But even this does not always apply – quotations of the standard critical points for significance tests such as 1.96, 1.645, 2.576 (maybe even 2.58 – but not 2.57) will commonly suffice, especially if the calculated value of a test statistic is nowhere near any of these values. Sensible discretion *must* be exercised in such cases.

Discretion must also be exercised in the case of small variations in the degree of accuracy to which an answer is given. For example, if 3 significant figures are expected (either because of an explicit instruction or because the general context of a problem demands it) but only 2 are given, loss of an accuracy ("A") mark is likely to be appropriate; but if 4 significant figures are given, this should not normally be penalised. Likewise, answers which are slightly deviant from what is expected in a very

minor manner (for example a Normal probability given, after an attempt at interpolation, as 0.6418 whereas 0.6417 was expected) should not be penalised. However, answers which are *grossly* over- or under-specified should normally result in the loss of a mark. This includes cases such as, for example, insistence that the value of a test statistic is (say) 2.128888446667 merely because that is the value that happened to come off the candidate's calculator. Note that this applies to answers that are given as final stages of calculations; intermediate working should usually be carried out, and quoted, to a greater degree of accuracy to avoid the danger of premature approximation.

The situation regarding any particular cases where the accuracy of the answer may be a marking issue should be detailed in the mark scheme rationale. If in doubt, contact your Team Leader.

g Rules for replaced work

If a candidate attempts a question more than once, and indicates which attempt he/she wishes to be marked, then examiners should do as the candidate requests.

If there are two or more attempts at a question which have not been crossed out, examiners should mark what appears to be the last (complete) attempt and ignore the others.

NB Follow these maths-specific instructions rather than those in the assessor handbook.

h Genuine misreading (of numbers or symbols, occasionally even of text) occurs. If this results in the object and/or difficulty of the question being considerably changed, it is likely that all the marks for that question, or section of the question, will be lost. However, misreads are often such that the object and/or difficulty remain substantially unaltered; these cases are considered below.

The simple rule is that *all* method ("M") marks [and of course all independent ("B") marks] remain accessible but at least some accuracy ("A") marks do not. It is difficult to legislate in an overall sense beyond this global statement because misreads, even when the object and/or difficulty remains unchanged, can vary greatly in their effects. For example, a misread of 1.02 as 10.2 (perhaps as a quoted value of a sample mean) may well be catastrophic; whereas a misread of 1.6748 as 1.6746 may have so slight an effect as to be almost unnoticeable in the candidate's work.

A misread should normally attract *some* penalty, though this would often be only 1 mark and should rarely if ever be more than 2. Commonly in sections of questions where there is a numerical answer either at the end of the section or to be obtained and commented on (eg the value of a test statistic), this answer will have an "A" mark that may actually be designated as "cao" [correct answer only]. This should be interpreted *strictly* – if the misread has led to failure to obtain this value, then this "A" mark must be withheld even if all method marks have been earned. It will also often be the case that such a mark is implicitly "cao" even if not explicitly designated as such.

On the other hand, we commonly allow "fresh starts" within a question or part of question. For example, a follow-through of the candidate's value of a test statistic is generally allowed (and often explicitly stated as such within the marking scheme), so that the candidate may exhibit knowledge of how to compare it with a critical value and draw conclusions. Such "fresh starts" are not affected by any earlier misreads.

A misread may be of a symbol rather than a number – for example, an algebraic symbol in a mathematical expression. Such misreads are more likely to bring about a considerable change in the object and/or difficulty of the question; but, if they do not, they should be treated as far as possible in the same way as numerical misreads, *mutatis mutandis*. This also applied to misreads of text, which are fairly rare but can cause major problems in fair marking.

The situation regarding any particular cases that arise while you are marking for which you feel you need detailed guidance should be discussed with your Team Leader.

Note that a miscopy of the candidate's own working is not a misread but an accuracy error.

Question	Answer	Marks	Guidance
1 (i)	$\text{Mean} = \frac{59972}{40} = 1499$ <p>Condone full answer of 1499.3 (despite over-specification rule)</p> $S_{xx} = 96767028 - \frac{59972^2}{40} = 6851008$ $s = \sqrt{\frac{6851008}{39}} = \sqrt{175667} = 419$ <p>NB Full answer is 419. 1263 (but only allow to 4sf due to over-specification rule)</p>	<p>B1</p> <p>M1</p> <p>A1</p> <p>[3]</p>	<p>CAO Ignore units</p> <p>For S_{xx}</p> <p>CAO ignore units</p> <p>NB Allow 1500 NB Answer must be decimal</p> <p>M1 for $96767028 - 40 \times \text{their mean}^2$ BUT NOTE M0 if their $S_{xx} < 0$</p> <p>For s^2 of 176000 (or better) allow M1A0 with or without working For RMSD of 414 (or better) allow M1A0 provided working seen For RMSD^2 of 171000 (or better) allow M1A0 provided working seen</p> <p>For use of 1499: $S_{xx} = 6886988, s^2 = 176589, s = 420.225, \text{RMSD} = 414.9$</p> <p>For use of 1500: $S_{xx} = 6767028, s^2 = 173513.5, s = 416.549, \text{RMSD} = 411.3$</p> <p>Give same credit to answers as for correct answers</p>

If they have the correct $P(X \geq 19)$ then give B1 and ignore any further incorrect notation.</p> <p>FT answer to (i)B for following three marks provided based on $1 - (P(19) + P(20))$ Dep on sensible attempt at $P(X \geq 19)$</p> <p>Allow 'accept H_0' or 'reject H_1' Must include 'insufficient evidence' or something similar such as 'to suggest that' ie an element of doubt either in the A or E mark. Must be in context to gain E1 mark. Do NOT allow 'sufficient evidence to suggest proportion cured is 0.78' or similar <u>99% method:</u> $P(X \leq 18) = 0.9539$ B1B1* CAO $0.9539 < 99\%$ M1* then as per scheme</p>
	<p>ALTERNATIVE METHOD FOR FINAL 5 MARKS</p> $P(X \geq 19) = 0.0461 > 1\%$	<p>B1</p>	<p>If combination of methods used, mark both and give higher mark. For either probability</p>	<p>No further marks if point probabilities used</p> <p>Do not insist on correct notation as candidates have to work out two probabilities for full marks.</p>

Question		Answer	Marks	Guidance	
		$P(X \geq 20) = 0.0069 < 1\%$ So critical region is $\{20\}$ (19 not in CR so) not significant. Conclude that there is not enough evidence to suggest that the new drug is more effective than the old one.	M1 B1* A1* dep E1* dep	For at least one comparison with 1% CAO dep on the two correct probabilities Dep on correct CR Ignore any work on lower critical region	Allow comparison in form of statement 'critical region at 1% level is ...' No marks if CR not justified Condone $X \geq 20$, $X = 20$, oe but not $P(X \geq 20)$, etc Allow 'accept H_0 ' or 'reject H_1 '
7	(iii)	With a 5% significance level rather than a 1% level, the null hypothesis would have been rejected. OR: 'there would be enough evidence to suggest that the new drug is more effective than the old one.' This is because $0.0461 < 5\%$	B1* B1* dep [2]	oe oe	FT their probability from (ii) but NO marks if point probabilities used There must be a sensible attempt to use $P(X = 19) + P(X = 20)$ or must have correct CR. Dep on correct answer of 0.0461 compared with 5% or 0.9539 compared with 95% or correct CR.
8	(i)	Inter-quartile range = $18.1 - 17.8 = 0.3$ Lower limit $17.8 - (1.5 \times 0.3) (= 17.35)$ No outliers at lower end. Upper limit $18.1 + (1.5 \times 0.3) (= 18.55)$ (Max is 18.6) so at least one outlier at upper end.	B1 M1 A1 M1 A1	dep on 17.35 dep on 18.55	FT their IQR for M marks only Allow 'No values below 17.35 for first A1' Allow 'Lower limit = 17.35 so no outliers (at lower end)' Watch for use of median giving 17.45 which gets MOA0 You must be convinced that comments about no outliers refer to lower tail only. Allow 'At least one value above 18.55' for second A1 Allow 'any value above 18.55 is an outlier' so at least one outlier.

Question		Answer	Marks	Guidance
				Do not allow 'There MAY be one outlier' oe Condone 'one outlier' Condone 'there are outliers' Watch for use of median giving 18.35 which gets M0A0 You must be convinced that comments about some outliers refer to upper tail only.
			[5]	
8	(ii)	$P(A) = P(\text{All 3 have orange centres}) = \frac{7}{20} \times \frac{6}{19} \times \frac{5}{18} = \frac{7}{228}$ $= 0.0307 \text{ (0.030702)}$ $P(B) = P(\text{All 3 have same centres}) =$ $\left(\frac{7}{20} \times \frac{6}{19} \times \frac{5}{18}\right) + \left(\frac{6}{20} \times \frac{5}{19} \times \frac{4}{18}\right) + \left(\frac{4}{20} \times \frac{3}{19} \times \frac{2}{18}\right) + \left(\frac{3}{20} \times \frac{2}{19} \times \frac{1}{18}\right) =$ $= 0.0307 + 0.0175 + 0.0035 + 0.0009$ $= 0.0526 = \frac{1}{19} \text{ (0.052632)}$ $\left(= \frac{7}{228} + \frac{1}{57} + \frac{1}{285} + \frac{1}{1140} \right)$	<p>M1 For 7/20×</p> <p>M1 For product of correct three fractions Without extra terms CAO Allow full marks for fully simplified fractional answers</p> <p>M1 For at least two correct triple products or fractions or decimals</p> <p>M1 For sum of all four correct</p> <p>A1 CAO</p> <p>[6] Allow 0.053 or anything which rounds up to 0.053 with working</p>	<p>Allow final answer of 0.031 with working ALTERNATIVE SCHEME ${}^7C_3/{}^{20}C_3 = 35/1140 = 7/228 = 0.0307$ M1 for either term in correct position in a fraction M1 for correct fraction A1 CAO</p> <p>ALTERNATIVE SCHEME ${}^7C_3/{}^{20}C_3 + {}^6C_3/{}^{20}C_3 + {}^4C_3/{}^{20}C_3 + {}^3C_3/{}^{20}C_3$ M1 for at least two correct terms</p> <p>M1 for sum of all four (all correct) either as combinations or decimals</p> <p>A1 CAO</p> <p>Please check all of the answer space for this part</p>
8	(iii)	$P(A B) = \frac{0.0307..}{0.0526..}$	M1	<p>For their 'A' divided by their 'B'</p> <p>Allow 0.584 from $\frac{0.0307}{0.0526}$</p>

Question	Answer	Marks	Guidance	
	$= 0.583 (= 0.58333)$ $P(B A) = 1$	A1 B1 [3]	FT their answers to (ii) provided answer < 1 CAO	Allow $\frac{7}{12}$

8 (v)	$P(\text{Has to select } > 2) = 1 - P(\text{Has to select } \leq 2)$ $= 1 - \left(\frac{14}{20} + \left(\frac{6}{20} \times \frac{14}{19} \right) \right) = 1 - (0.7 + 0.221) = 1 - 0.921$ $= 0.079 (= 0.078947)$	M1 M1 A1 [3]	For $\left(\frac{6}{20} \times \frac{14}{19} \right)$ For 1 – sum of both CAO	For any of the methods below allow SC2 for $1 - 0.079 = 0.921$ or $1 - 3/38 = 35/38$ o.e. as final answer This is $1 - P(C' + CC')$
	OR $P(\text{Has to select } > 2) = P(\text{First 2 both cherry}) = \left(\frac{6}{20} \times \frac{5}{19} \right)$ $= 0.079 = \frac{3}{38}$	M2 A1	For whole product CAO	Without extra terms added M1 if multiplied by k/18 only where $0 < k < 18$ (seen as a triple product only) This is $P(CC)$.
	OR $1 - (P(0 \text{ cherries}) + P(1 \text{ cherry})) =$ $1 - \left(\frac{14}{20} \times \frac{13}{19} + \left(\frac{6}{20} \times \frac{14}{19} \right) + \left(\frac{14}{20} \times \frac{6}{19} \right) \right)$ $= 1 - (0.4789 + 0.2211 + 0.2211) = 1 - 0.9209$ $= 0.079$ OR $\left(\frac{6}{20} \times \frac{5}{19} \times \frac{14}{18} \right) + \left(\frac{6}{20} \times \frac{5}{19} \times \frac{4}{18} \times \frac{14}{17} \right) + \left(\frac{6}{20} \times \frac{5}{19} \times \frac{4}{18} \times \frac{3}{17} \times \frac{14}{16} \right) + \left(\frac{6}{20} \times \frac{5}{19} \times \frac{4}{18} \times \frac{3}{17} \times \frac{2}{16} \times \frac{14}{15} \right) + \left(\frac{6}{20} \times \frac{5}{19} \times \frac{4}{18} \times \frac{3}{17} \times \frac{2}{16} \times \frac{1}{15} \times \frac{14}{14} \right)$	M1 M1 A1 M1	For any term For 1 – sum of all three CAO For any term	This is $1 - P(C'C' + CC' + C'C)$ This is $P(CCC' + CCCC' + CCCCC' + CCCCCC' + CCCCCC')$

Question	Answer	Marks	Guidance	
	$= \frac{7}{114} + \frac{14}{969} + \frac{7}{2584} + \frac{7}{19380} + \frac{1}{38760}$ $= 0.079$	M1 A1	For sum of all five terms (all correct)	

NOTE RE OVER-SPECIFICATION OF ANSWERS

If answers are grossly over-specified, deduct the final answer mark (max once per question). Probabilities should also be rounded to a sensible degree of accuracy. In general final non probability answers should not be given to more than 4 significant figures. Allow probabilities given to 5 sig fig.

PLEASE HIGHLIGHT ANY OVER-SPECIFICATION and also non alignment in question 5(i)

Please note that there are no G or E marks in scoris, so use B instead

NB Please annotate every additional answer sheet even if full marks awarded or the page is blank – Use BP symbol

Other rules for annotation: In the 10 standardisation scripts annotate everything that gets anything other than zero or full marks. After this, annotate down the right hand side in Q7(ii), up to where marks stop being scored, in the order given in the mark scheme. Annotate anywhere else where necessary to clarify how you have awarded the marks.

Additional notes re Q7 part ii (first three marks)

Minimum needed for B1 is p = probability of being cured.

Allow $p = P(\text{patient being cured})$

Definition of p must include word probability (or chance or proportion or percentage or likelihood but NOT possibility, number or amount).

Preferably given as a separate comment. However can be at end of H_0 as long as it is a clear definition ' p = the probability of patient being cured.'

Do NOT allow ' p = probability of patient in the sample being cured'

Do NOT allow 'p = the probability of patient being cured is different'

Allow $p=78\%$, allow only p or θ or π or ρ . However allow any single symbol if defined (including x)

Allow $H_0 = p=0.78$, Allow $H_0 : p = \frac{39}{50}$ or $p = \frac{78}{100}$

Allow NH and AH in place of H_0 and H_1

Do not allow $H_0 : P(X=x) = 0.78$

Do not allow $H_0 : =0.78, =78\%, P(0.78), p(x)=0.78, x=0.78$ (unless x correctly defined as a probability)

Do not allow H_0 and H_1 reversed

For hypotheses given in words allow Maximum B0B1B1

Hypotheses in words must include probability (or chance or proportion or percentage) and the figure 0.78 or

Thus eg $H_0 : P(\text{patient being cured}) = 0.78, H_1 : P(\text{patient being cured}) > 0.78$ gets B0B1B1

Do not allow if H_1 wrong

Additional notes re Q7 part ii

Smallest critical region method:

Smallest critical region that 19 could fall into is $\{19, 20\}$ and has size 0.0461 gets B1, This is $> 1\%$ gets M1, B1, A1, E1 as per scheme

NB These marks only awarded if 19 used, not other values.

Use of k method with no probabilities quoted:

This gets zero marks.

Use of k method with one probability quoted:

Mark as per scheme

Line diagram method and Bar chart method

No marks unless correct probabilities shown on diagram, then mark as per scheme.

Lower tailed test done with $H_1 : p < 0.78$

Hyp gets max B1B1B0

If compare with 1% give SC2 for $P(X \leq 19) = 1 - 0.0069 = 0.9931 > 1\%$ and SC1 for final conclusion, otherwise give zero.

Two-tailed test done with $H_1 : p \neq 0.78$

Provided compare with 0.5% give SC2 for $P(X \geq 19) = 0.0461 > 0.5\%$ and SC1 for final conclusion
