

MEI Introduction to Data Science

Lesson 3: Cleaning, formatting and grouping data

Activity 2: Grouping/filtering of data

This activity explores whether petrol or diesel cars are heavier and which have higher emissions.

Checkpoint 1

Why might values of 0 have been recorded for the masses of some of the cars?

Are the statistics given by `describe()` suitable for the masses of cars? Give some supporting evidence for your answer.

Checkpoint 2

Use the measures calculated above to answer the original problem: Are petrol or diesel cars heavier and which have higher emissions?
